

## BRAND OF BRANDS

For several years **LISTA** has been helping top race teams and OEMs declutter, organize and arrange workshop spaces into efficient places of work, thanks to its storage solutions

Workspace equipment from LISTA has been tried and tested thousands of times in the automotive industry and motor racing. All major brands rely on the high-quality system that flexibly fulfills every customer requirement from single-drawer cabinets to fully integrated work lines. The modular design and excellent quality ensure that LISTA applications are a perfect fit, as well as being durable and robust. Special requirements of the sector are implemented in detail, enabling you to benefit from a personalized, coherent solution that makes your workshop better organized, more efficient and even more visually appealing.

LISTA knows what is important in the automotive industry. That's why it offers a wide range of purpose-specific modules, superstructures and accessories to equip your workshop to the highest standards. Industry-specific details and special solutions for fluid management

**"FOR MANY YEARS, WORKSHOPS ALL OVER THE WORLD HAVE SUCCESSFULLY BEEN WORKING WITH SOLUTIONS FROM LISTA"**

and other typical MRO applications provide top ergonomics; enhancing your efficiency and productivity.

For many years workshops all over the world have been successfully working with solutions from LISTA, including the service centers of major brands such as Audi, BMW, VW, Porsche, Mercedes-Benz, Ferrari and AMG. Experience, quality and durability make LISTA a strong partner in the MRO field.

Mercedes-Benz has set the bar as regards elegance,

representativeness and innovation with the construction of its new car showroom in Bremen, Germany. Therefore, right from the beginning, only one supplier came to mind to furnish the service workshop, including saddlery, body construction, AMG area and the newly conceived direct service stations. LISTA met the challenge with top-quality service and a tailor-made, special solution.

This challenging project included the complete fitting of the workshop with workbenches, hardware cabinets, quality control stations and shelving to store parts. In addition another important element are the service stations developed especially for the branch, which have a range of customized features such as an integrated service terminal, network and power supply, compressed air, control for the lifting device, washbasin, disposal unit and storage spaces for small parts.

"It was important to tackle this complex task in a time- and cost-efficient manner," said the client about the project. <
